

Deployment options

We offer a number of deployment options for MJI TeamWorks. For organisations who wish to manage their installation of MJI TeamWorks we provide the option for an onsite Intranet or offsite Internet implementation.

MJI TeamWorks can also be implemented as a managed solution. When implemented as a managed solution, organisations can choose either an ASP or dedicated implementation. Our ASP solution is suited to organisations who require a rapid implementation of MJI TeamWorks or who plan to use MJI TeamWorks for a limited period.

Onsite - Intranet

When deployed on an Intranet, MJI TeamWorks is installed on a server within your organisation. Your internal users access the application via your local network using a browser.

Offsite - Internet

When deployed on the Internet, MJI TeamWorks is installed on a server hosted outside of your organisation. Internal and external users access the application via the Internet using a browser.

Managed solution

If you opt for offsite deployment, we offer MJI TeamWorks as a managed solution. As a managed solution, we can provide all the infrastructure and services required to run MJI TeamWorks. This can include server supply, application hosting and implementation of software upgrades. We provide two managed solution options.

:: asp

Your organisation accesses MJI TeamWorks on a shared server hosted in a managed server suite.

:: dedicated hosted

MJI TeamWorks is implemented on a dedicated server located in a managed server suite. This dedicated option is particularly applicable to organisations with larger numbers of users or who need high levels of application availability.

System requirements

Client: Internet Explorer 5.5+ or Netscape 7+. **Server:** Windows 2000 Server, Microsoft .NET Framework and SQL Server 2000. Please contact us for full server requirements.

Modular solution

MJI TeamWorks is a modular software solution. Organisations can selectively implement the modules - therefore building a solution that matches their individual requirements. Contact us for a list of the currently available modules and our release schedule for additional modules.
